Floor Plate 2 Post Car Lift

The floor plate 2 post parking lift is an industry leader. The hydraulic hose and equalization cables run across the floor and are covered by a beveled diamond plate steel floor plate approximately 1 inch tall in the baseplate lift (floor plate). The baseplate lift has a locking mechanism that is operated with the dual point release system.

The power unit supplies pressurized hydraulic fluid to the cylinders (located in both columns) through hydraulic hoses that run between the columns. Each of these cylinders has a piston that is moved (actuated by hydraulic pressure) and "lifts" the carriages and arms, which in turn "lift" the vehicle. Two sets of equalization cables (high strength aircraft cable) provide tension on the carriages to make sure that both sides go up at the same speed. The pressurized hydraulic fluid powering the cylinder/piston combination provides the lifting power.

Features:

1. CE, ROHS, and ISO certificated to American and Europe standard
2. AC24V reliable actuators for efficient and precise lifting
3. Platform can be stopped at any height to cater to various cars and roof height
4. Loading test: 125% dynamic load test and 175% static load test
5. Strong Steel Design. Brief structure makes it much easier to operate and maintain
6. Powder spray painting surface, anti-corrosion. OEM logo and paint color customization available
7. High performance powerful hydraulic cylinder driving system, durable steel rope and anti-friction carriage guides guarantee smooth operation and safety

Feature
